Art Unit: 1724

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-25 drawn to a process for removing water from a lipophilic fluid, classified in class 210, subclass 689.
- II. Claims 26-30, drawn to a composition of matter, classified in class 502, subclass 401.

Applicant should note that although the preamble of claims 19-25 recites "system", the body of these claims merely recites process steps; and therefore, these claims have been included in process Group I, above.

The inventions are distinct, each from the other because:

Inventions I and II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product of Group II could be made by another process, different from that of Group I. For example, this product could be made without exposing the absorbent matrix to a water emulsion, e.g. by first exposing it to water alone, and then to an emulsifier.

Art Unit: 1724

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification and divergent subject matter, and because the searches for the individual Groups are not coextensive, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

In addition to the above noted restriction requirement, an election of species is also required.

This application contains claims directed to the following patentably distinct species of the claimed invention:

- (1) absorbent matrix (e.g. methacrylamide with a silica spacer, carboxymethyl cellulose without a spacer, etc.);
- (2) morphology (e.g. fibrous, particulate, etc.);
- (3) physical form (e.g. woven sheet, film, membrane, etc.);
- (4) triggering mechanism (e.g. light, pH, temperature, sound, electric field, pressure, vibration, etc.);
- (5) lipophilic fluid (e.g. decamethylcyclopentasiloxane, octamethylcyclotetrasiloxane, etc.); and
- (6) adjunct ingredient (e.g. enzyme, bleach, surfactant, perfume, pH buffer, etc.).

Art Unit: 1724

Applicant is required under 35 U.S.C. 121 to elect a single disclosed absorbent matrix species, a single disclosed morphology species, a single disclosed physical form species, a single disclosed triggering mechanism species, a single disclosed lipophilic fluid species and a single disclosed adjunct ingredient species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1, 6, 10, 12-15, 19 and 26 appear to be generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, Applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, Applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Art Unit: 1724

Should Applicant traverse on the ground that the species are not patentably distinct, Applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the Examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to I. Cintins whose telephone number is (703) 308-3840. The examiner can normally be reached on Monday through Friday from 8:30 AM to 5:00 PM.

The fax phone numbers for this art unit are: (703) 872-9311 for "Official" faxes after Final Rejection; (703) 872-9310 for all other "Official" faxes; and (703) 872-9492 for "Draft" and other "Unofficial" faxes.

Any inquiry of a general nature or relating to the status of this application should be directed to the Group receptionist whose telephone number is (703) 308-0661.
